Small hand	★★★
Medium hand	★★★
Large hand	★★★
Left-handed	★★★

## THE POINTS OF EXCELLENCE

### Wire cutting notch

The blades feature a notch that allows for the cutting of small wires without damaging the cutting edge.

### Sap groove

The sap groove prevents the blade sticking when cutting "sappy" wood. It saves time and makes pruning easier by removing sap and debris after each cut.

### Forged aluminum handles

Lightweight, strong and sturdy thanks to special aluminum alloys and advanced precision forging methods. Equipment comes with a lifetime guarantee\*.

## ACCESSORIES

## MAINTENANCE

### Cleaning

It is advisable to clean your tool after each use.

If your tool is particularly dirty or subject to rusting after exposure to moisture, do not delay cleaning.

### Oiling

After cleaning, it is advisable to oil the tool so as to protect it from corrosion. The oil will also unjam the tool.

### Sharpening

It is advisable to sharpen your tool at least once a day, but if you feel that your tool is not cutting as well as usual, sharpen it right away!

### Dismantling

It is advisable to dismantle your tool on a regular basis, but at the very latest when it appears to be jammed.

## PARTS REPLACEMENT

### Changing the blade

When the blade and the anvil-blade no longer cross, or when the blade is badly damaged, it is advisable to change it.

Regulate the working of the blade and anvil-blade by adjusting the tightening of the nut. The blade should rub against the anvil-blade over 2/3 of its length.

### Changing the thumb catch

When the thumb catch is damaged and loosens when used, even when the screw is readjusted, change it.

### Changing the plastic coatings for handles

If the coatings are badly damaged, you can replace them.

Soak the coatings for 2 minutes in boiling water - recommended glue: Loctite 415.
